

**2016-190: Pen surface soil performance of various soils during the first two cycles of cattle at a feedlot in Saskatchewan**

**Researcher: Terry Fonstad**

**Funding: \$22,998**

**Different types of soil not only lead to increased leaching, but also increased costs as pens containing water have shown to need 50% higher cattle maintenance. Three different types of onsite soils will be used in six pens throughout different seasons.**
