

**2016-084: A field comparison of intranasal versus injectable BRD vaccination on beef calf titres, ADG, morbidity and mortality**

**Researcher: Nathan Erickson**

**Funding: \$15,000**

**Beef producers have several vaccination choices when ensuring the health of their animals. However, concerns about efficacy have been raised, which is further complicated by various protocols recommended for each type of vaccine. Given new information available on the Bovine Viral Disease, these researchers wanted to compare live modified, nasal injectable protocols to traditional injectable vaccines and their protocols.**
