

2019-114: A screen for drugs that reveal Mycoplasma bovis to the bovine immune system

Researcher: Antonio Ruzzini

Funding: \$24,200

A successful treatment for Mycoplasma Bovis has evaded us for some time. This novel research, led by Dr. Tony Ruzzini, will study proteins released from the bacterial membrane of this disease, and use available drugs to determine if they can disrupt them, essentially removing the "cloak" that makes its treatment so difficult.
